

Here listed are some potential (may differ over cross-browsers) bugs which I found (in Chrome) and tried fixing while developing the respective webpages. I am attaching screenshots along with every issue to make the addressing more clear.

- **Reverse working of 'Navbar Open' and 'Navbar Close' icons:** The open-close icons (marked with red circles) start behaving oddly and their functions (open/close) are reversed when returning or moving to a new webpage.

- **The width of the slider cards (in 'Services' page) distorts when the screen size is set between 767px-991px:**

- *The slider in the Services page hides the navbar due to a high z-index.*
